JOB DESCRIPTION:

A great contract opportunity for a Human Factors Engineer in Northern VA. Client specializes in combat vehicles and systems and they are aggressively seeking the right candidate. Responsibilities will be analyzing, creating, and communicating user workflows, wireframes, visual design treatments, site navigation and architecture, and user interface requirements based on a deep understanding of user needs and tasks. Also, candidate will use qualitative/quantitative analysis, human factors and usability methodology's, as the basis for input into the overall design process. Other responsibilities are to create, maintain, and update UI wireframes for use cases/requirements; Document UI specifications for screen designs and work with multi-disciplinary engineers throughout the organization to ensure human factors, usability and ergonomics are properly considered in the design process, including the advocacy of human factors in the context of cost and schedule program constraints. Candidate must have excellent communication skills (written & verbal), experience with MIL STD 1472 & MIL HDBK 759 and the ability to conduct hands-on evaluations on combat vehicles, including working in semi-confined spaces. The ability to obtain a US Security Clearance is required for this position.

Position type: Contract Poss Temp to Perm

Position location: Woodbridge, VA

Potential pay up to: 91.52 K \$ /Yr
